

Work Specification

Species: Willow **Tree Nos:** T1 & G1

Retrenchment pruning of each of the trees, by reducing the overall height of each trees by a maximum of approximately 10 metres overall, reducing each crown by shortening heavy, long or weakened branches throughout the crown, while retaining as much leaf area as possible to encourage the development of new secondary branches from epicormic shoots or from dormant or adventitious buds.

See photographs below.

Recommended timescale: The work is recommended to be carried out within 6 months and during the growing season to encourage good wound wood development and new leaf and branch development during the following growing season.
