

FoodDriver

FoodDriver is the world's first decentralized App that will completely change people's experience in shopping, delivering and selling. The dApp will be a great contribution to the sharing economy. The dApp is made to work worldwide.

1

FoodDriver is an innovative dApp that is used for customer motivation and delivery. But it is more than that - it benefits not only store/restaurant owners and customers but, crucially also, deliverymen.

2

It works with Android and iOS

3

The FoodDriver dApp has a large number of marketing tools which help restaurant/store owners to increase client loyalty and the average bill.

4

It equally benefits store/restaurant owners, delivery men and customers.

5

A Smart Contract runs the FoodDriver dApp, controls all its functionality, and guarantees a satisfactory outcome to all 3 types of users.

6

Foodriver is a revolutionary leap beyond conventional delivery apps! Our cutting-edge smart contract isn't just a crypto payment acceptor; it's a dynamic ecosystem meticulously designed to harmonize the interactions among the three key users of our platform. Its mission? To seamlessly connect users, ensuring a flawless fulfillment of obligations, leaving everyone involved not just satisfied, but instantly thrilled by a 100% gratifying experience!

7

We firmly assert that forward-thinking regions like the UAE, Saudi Arabia, and Qatar are uniquely poised to recognize and embrace our innovative endeavors in implementing Web 3.0 technologies. Our vision extends beyond the realm of gaming, extending into the tangible sectors of the economy and the daily lives of ordinary people. It is widely acknowledged that Web 3.0 will soon become the driving force behind all facets of our existence. Positioning ourselves at the forefront of this imminent global transformation is not merely an opportunity; it is a strategic imperative for ushering in a monumental era of change.

According to worldwide statistics, the delivery market is growing very rapidly, and especially now following on from these recent years of global pandemic (400% growth per year in the delivery market) that changed consumer habits for good and established “delivery” in itself as a huge and still strongly growing market segment that needs to modernize to catch up with this growth.

Each country has its own players in the delivery market - but market research and statistics show that not many of them have been using the latest strategies and technologies, making many of these old-style delivery companies easy prey to be pushed out of business.

Being ready to go as the first with this innovative approach will allow the early investors in FooDriver to profit greatly from an expected explosion in the adoption of FooDriver across multiple segments and geographies.

FooDriver is a fully completed and operational dApp that has entered into Beta-testing. Currently, we are working on coding the smart contract and broadening the initial "community of use".

There are a lot of known issues that can occur between deliverymen and today's delivery companies such as demands for unrealistic delivery times, lack of safety, irregular working hours, and low salaries. The unique capabilities of our smart contract to create an unlimited number of jobs also allow us to solve the issues of delivery speed and instant payments to deliverymen.

Smart contract scenarios solve the problems of all application users, instantly and automatically. In 99 percent of cases of disagreement, there is no need to contact online support, which greatly improves the quality of service.

FooDriver also cuts costs (2-3 times) for the restaurant owners that they usually pay.

We are an international team of blockchain enthusiasts with unique experiences. We all believe that the success of the future lies in the development of technology. After working together for the last 3 years, we have become like one big family driven by the same goal, and we are open to you joining in our imminent success.
