FIRE STATION FLOOR COATING SOLUTIONS

Strong Bond offers the highest quality fire station and public safety facility flooring solutions in Atlantic Canada.

We understand that floors for Fire Departments and other Public Safety Facilities need to be extremely durable and have clearly identifiable safety markings.

Our floor systems offer the ability to be customized to provide unique marking and colour coding areas for trucks and other equipment as well as permanent line striping and safety markings.

From fire apparatus bays where durability is of the utmost importance, to locker rooms and kitchens where ease of maintenance is important,

Strong Bond has the right flooring solution for you.

We do not believe in a “one size fits all” approach to any project. Each project has different requirements and budgets, and we guarantee that we will present you with the right solutions for your situation.

Our valued employees are factory trained by the absolute best manufacturers in the industry and we utilize the highest quality products and equipment to provide you the absolute best floor for your facility.

Strong Bond... Floors Done Right!

FIRE STATION FLOOR PACKAGES

Strong Bond understands the unique flooring needs of each Fire Department.

We offer three main flooring options for Fire Department Epoxy Floors and can also create custom solutions to meet any unique requirements your Fire Department may have.

SB FLAKE FLOOR FS

Our SB Flake Floor for Fire Departments is very popular in Atlantic Canada. This is an industrial version of our standard SB Flake Floor. We start with preparing the floor surface by grinding and repairing any damage to the concrete.

- A commercial prime coat is applied to the concrete.
- The initial coat of commercial epoxy is applied to the floor and the flakes are broadcast to rejection.
- Once cured an additional coat of epoxy and flakes are applied.
- Custom Safety Lines for truck parking can be added at this stage to be embedded under the top coat.
- This double broadcast base is then coated with a chemical resistant top coat to seal the floor and provide protection and durability.
- This floor is considered to be decorative in appearance with many options for colour.

SB QUARTZ FS

This is an industrial version of our standard SB Quartz Floor. We start with preparing the floor surface by grinding and repairing any damage to the concrete.

- A commercial prime coat is applied to the concrete.
- The initial coat of commercial epoxy is applied to the floor and the quartz silicate are broadcast into the epoxy.
- Once cured an additional coat of epoxy and quartz are applied.
- Custom Safety Lines for truck parking can be added at this stage to be embedded under the top coat.
- This double quartz base is then coated with a chemical resistant top coat to seal the floor and provide protection and durability.
- This floor is considered to be decorative with the many quartz colour choices yet durable with the strength the quartz silicate provides.

SB SHOP FLOOR FS

Our SB Fire Shop Floor for Fire Departments is our strongest option for a Fire Department Floor in Atlantic Canada.

- We start with preparing the floor surface by grinding and repairing any damage to the concrete.
- A commercial prime coat is applied to the concrete.
- The initial coat of commercial epoxy is applied to the floor and the clear quartz silicate are broadcast into the epoxy.
- An optional second layer of this quartz silicate epoxy can be added. This is our double broadcast quartz floor.
- Custom Safety Lines for truck parking can be embedded before our top coat is applied.
- This SB Shop Floor is then coated with a chemical resistant top coat to seal the floor and provide protection and durability.
- This floor is the strongest and most durable of our Fire Station floors. While not as decorative as the flakes or quartz, it makes up for it in strength.
