WHY POLISH?

Polished Concrete is becoming extremely popular for commercial properties. It offers a long term, low cost and low maintenance, environmentally responsible option for your facility's concrete floors.

Looking for a green way to transform your workspace, be it a warehouse, showroom, restaurant, mechanical shop, auto dealership, or basically any space you can dream of? Look no more. With a Strong Bond polished concrete floor, not only are you doing the environment a favour, but you may also be helping your bottom line.

Easy to clean, no more dust, no more expensive stripping and waxing janitorial costs. The long-term cost of a polished floor will save you money while providing a healthier and environmentally responsible building for customers and employees. You may even see reduced energy costs due to improved light reflectivity.

The options for polishing are virtually endless. We can add colour, logos, signs, patterns and more. Give us a call today to discuss how we can make your polished floor a reality.

REDUCE DUST

Polished concrete eliminates this dusting, thereby minimizing maintenance costs over unpolished concrete

DURABLE

Polished concrete surfaces are tightly compacted to reduce the development of stains. At the same time, they do not require any waxing or stripping treatments

SLIP RESISTANCE

The benefits of mechanically grinding and flattening the floor ultimately increase the coefficient of friction when compared to ordinary concrete

GOOD FOR ENVIRONMENT

A polished floor requires less chemicals, no VOC's and generally will improve air quality and light reflectivity, creating a healthier workspace for your employees

A STAIN-RESISTANT SURFACE

By densifying and sealing the surface, polished concrete can transform a porous concrete floor into a tight floor that is dense enough to repel water, oil, and other contaminants, preventing them from penetrating the surface

DENSIFYING / DUST CONTROL

With Strong Bond Coating's unique densifying system you can rest easy knowing your floor is working for you.

We provide an abrasion resistant, non-dusting, harder concrete surface that will not only reduce the need for expensive re-application of treatments like coatings or sealers, but more importantly, costly downtime.

Our densifier hardens both new and existing concrete slabs and is proven to provide long-term performance at lower costs than traditional treatments, keeping money in your pocket.

STAINING / DYEING

Concrete staining or dyeing has become very popular as a permanent, environmentally friendly, solution for concrete floors in office buildings, schools, government and healthcare facilities. Strong Bond has an infinite number of options available for you.

With our advanced colouring system we can customize and style any floor you desire. With a full selection of dyes and stains, our team can help add personality to your space.
