# SOLID SOLUTIONS

## FIRST FOUNDATIONS TRAINING BY VERSAPILE

A partnership approach driving employment and economic opportunities while building solid and long-lasting structures in Indigenous communities.

### Beginner

A beginner has little experience in construction and/or equipment operation. For beginners, installs are usually done by a VersaPile Crew but involving trainees so they might learn how to perform a proper installation. This is hands-on training to move into Experienced

### Experienced

For those with fundamental understanding of construction, with basic experience operating equipment. In this stage, most often VersaPile will send a single foundation expert to your community. They will ensure solid foundation installation using local skilled operators and equipment.

### Expert

An expert is a Certified Installer, with experience installing VersaPile foundations in their community. At this level, VersaPile typically offers occasional support over email or phone. Experts can take their skills and offer foundation contracting to nearby communities or businesses.

**Install Solid Foundations That Last for Generations**

# ON-SITE TRAINING

## No More Concrete

VersaPile can help you build solid structures without the mess of concrete. No more massive bags of useless spoiled cement mix to dispose of, our solutions can be stored indefinitely outdoors.

## Build When You Want

Foundation materials can be transported on winter roads and can be installed with equipment already in your community. Wait for the ground to thaw and install solid foundations when you want.

## Foster Jobs & Economy

When a community installs its own foundations, it creates training opportunities, jobs, and more money stays in the community. Remote communities can often complete projects for 50% of the cost of an outside party.
